

*Seventy-five percent of Americans have trouble taking their medicine as directed. This lack of adherence is costing people their health and wellbeing. Thousands of deaths and medication-related hospital admissions occur every year \**

To address these challenges, RN Health Management has developed a **Medication Management Program**, a personalized service designed to help clients manage their medications safely, effectively, and as medically prescribed.

Our nurses reconcile medication orders and communicate with prescribers and pharmacies to manage medication type, dosage, interactions, and side effects. Nurses can suggest cost effective alternatives for medications and delivery methods.

The program also provides education and support to caregivers who assist the client with medications. We create a personalized Medication Administration Record with our proprietary, advanced cloud-based Electronic Medical Record system. Our nurses are also available between visits, to respond to medication-related questions or concerns.

### Benefits

- **Adherence:** Helps to ensure medication is taken exactly as prescribed and instructed
- **Advocacy:** Nurse oversight, personalization, and medication minimization when possible and appropriate
- **Consolidation:** A single point of medication management across all prescribers
- **Discrepancy Avoidance:** Identification of medication discrepancies between prescribers
- **Cognitive Capacity:** Additional oversight in the event of a client's diminishing cognitive capacity
- **Cost Reductions:** Recommendations of cost-effective options for medications and delivery system
- **Education:** Ongoing client and caregiver-focused medication education and support
- **Hospitalization Mitigation:** Supports reduction in ER visits and hospital admissions due to adverse medication events

All billing is private pay and based on RN Health Management hourly billable rates.
